

- a temporary concealed power supply tower which takes up minimal space in plan, taking advantage of the vertical axis to offer access to the sockets
- boasts an IP54 certification, achieved through a specialised rubber seal that safeguards against dust and water ingress
- Its robust resistance to solid particles and protection from water splashes make this tower an ideal choice for environments exposed to humidity and dust.
- incorporates LED lighting that serves as a courtesy light. When raised, the product emits a soft light, creating a pleasant ambience. The central button, made of silicone, remains functional at all times to facilitate use, even in low-light conditions.
