3 door positioning

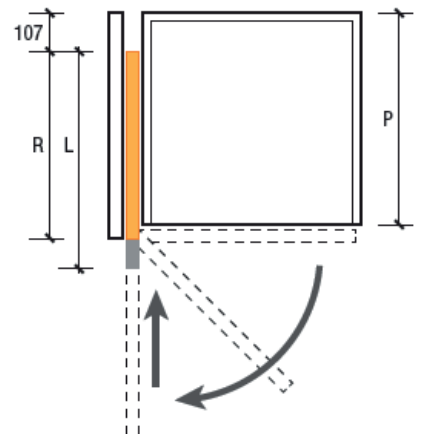

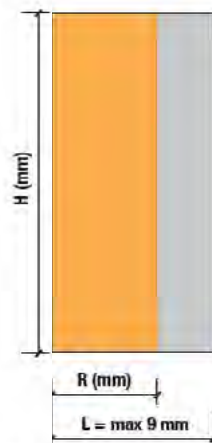

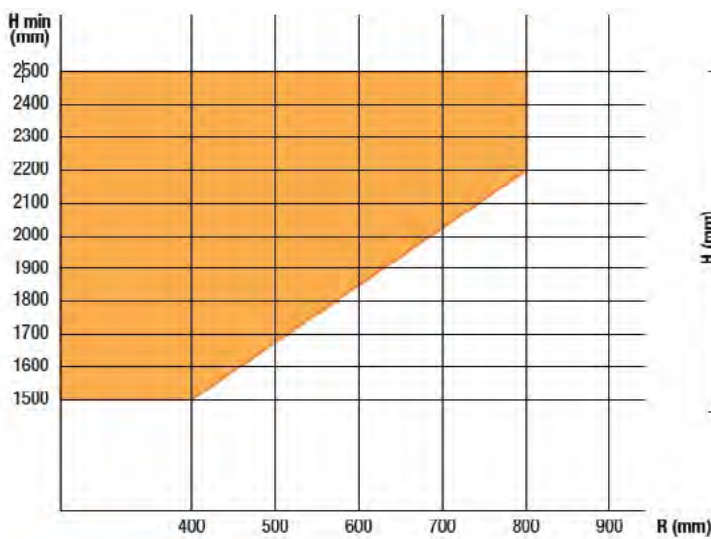

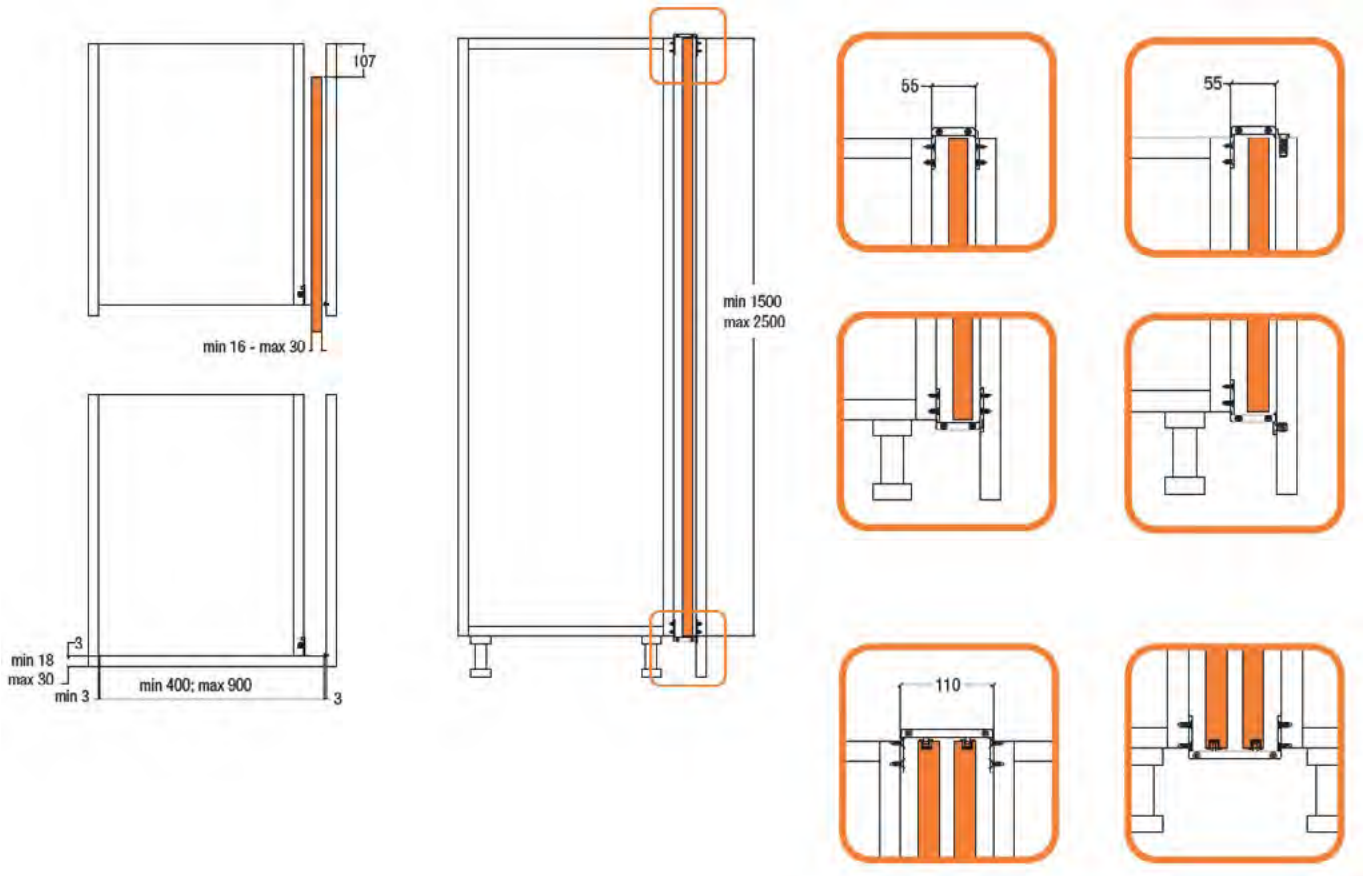

4 door positioning

Exedra is a pocket door system that incorporates an assisted soft-close door return mechanism and a door opening safety device.

What's more, Exedra is easy to install, adjust and, if need be, to inspect inside. All three movements are controlled from the front in a simple, intuitive way and, if necessary, the entire mechanism can be removed without dismantling the entire cabinet.

- R = Door movement
- R = Rappel de la porte
- R = Retorno de la puerta
